On this page

- [Main window](#)
- [Tab bar & start tab](#)
- [Window layout](#)
- [Related pages](#)

The interface is flexible and customisable. Window sizes, sorting and views are saved per user.

Main window

Screenshot-Platzhalter

The main window with menu bar.

Fixed menu bar (File, Edit, Window, Help; on macOS in the system menu), workspaces (permission-based) and the global search.

Tab bar & start tab

Screenshot-Platzhalter

Toolbar of a tab bar.

Each split has a **start tab** (home tab) to control it:

- **Maximise** – hides other tab bars.
- **Close** – removes the split.
- **Active home/tree tab bar** – where new tabs resp. tree tabs open.
- **Extras** – start tab settings (incl. [Desktop](#)).

Window layout

Screenshot-Platzhalter

Split a tab bar via drag & drop.

Tabs can be moved by drag & drop; dragging a tab over content creates a new split. Disable splitting via *Window Disable window splitting*.
