App – Nuclos

Preview

Preview. The Nuclos App is still under development. Some features are marked „in preparation“, and store links will follow with the release. This documentation describes the current state.

The **Nuclos app** is a mobile, **metadata-driven** client. It renders business objects, lists and forms straight from the Nuclos metamodel – the UI is generated automatically, without coding per app.

Key entry points

What is the Nuclos App?

Concept: generic, metadata-driven, Android and iOS.

[Open](#)

Install and connect to a server

Set up the app and connect it to your instance.

[Open](#)
