Import nuclets automatically at server start

From Nucleos **4.2024.23**, Nucleos automatically imports nuclets from the folder `<nucleos-home>/data/nucletimport` on server start.

- Import only if the **checksum** differs from the already imported version.
- Nuclets may be placed as a **folder** – they are automatically zipped for import.
- Schema constraints are dropped/rebuilt only once each (like the REST import); otherwise the import behaves like via the GUI.
- The server automatically enters **maintenance mode** for the import and leaves it afterwards (if started in maintenance mode, it stays there).
- From **4.2024.31**: import in alphabetical order; the installer creates the `nucletimport` folder automatically.
