Assign components and export

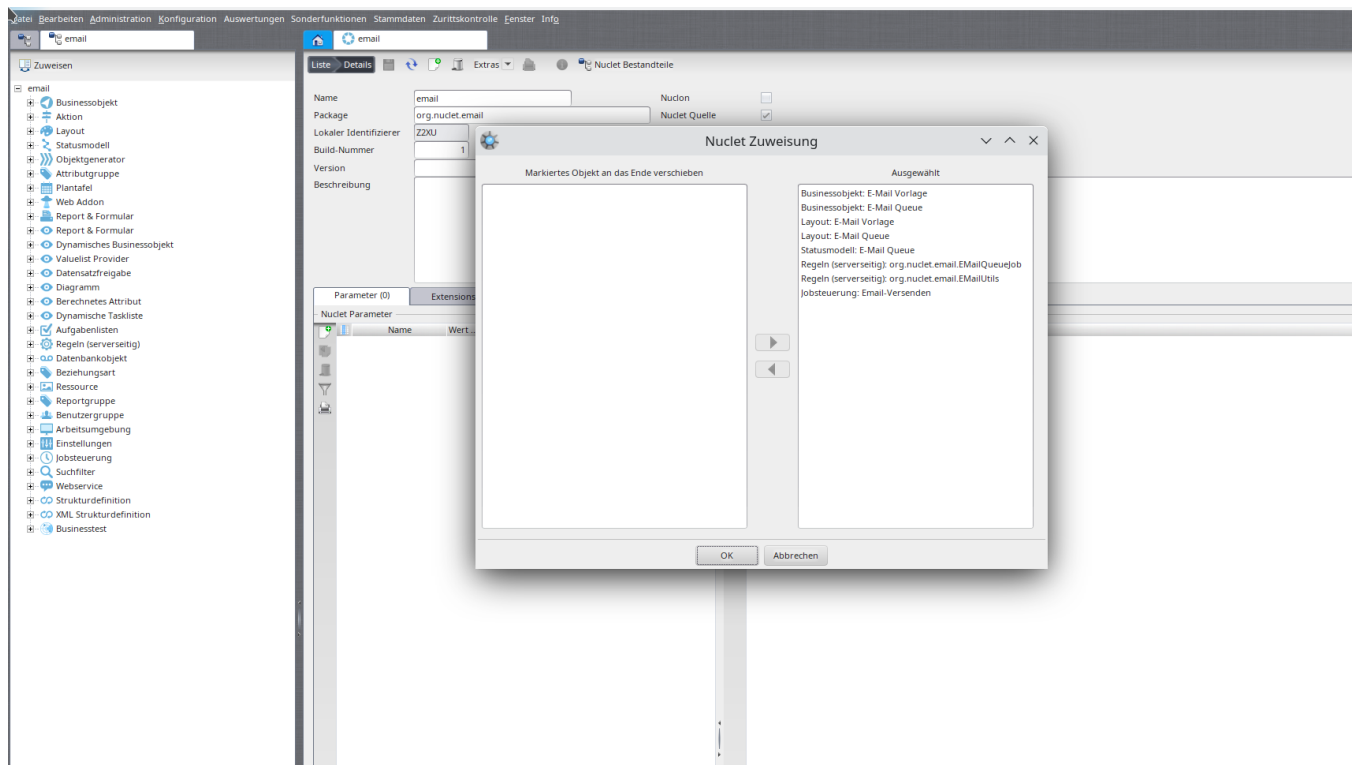

A nuclet bundles selected configuration components into an archive file that can be imported into another instance.

1. Open the nuclet under **Configuration Nuclet**.
2. Go to **Nuclet components** and click **assign** on the left.
3. Assign the desired components to the nuclet.
4. Choose the location via **Export** and the ... button.

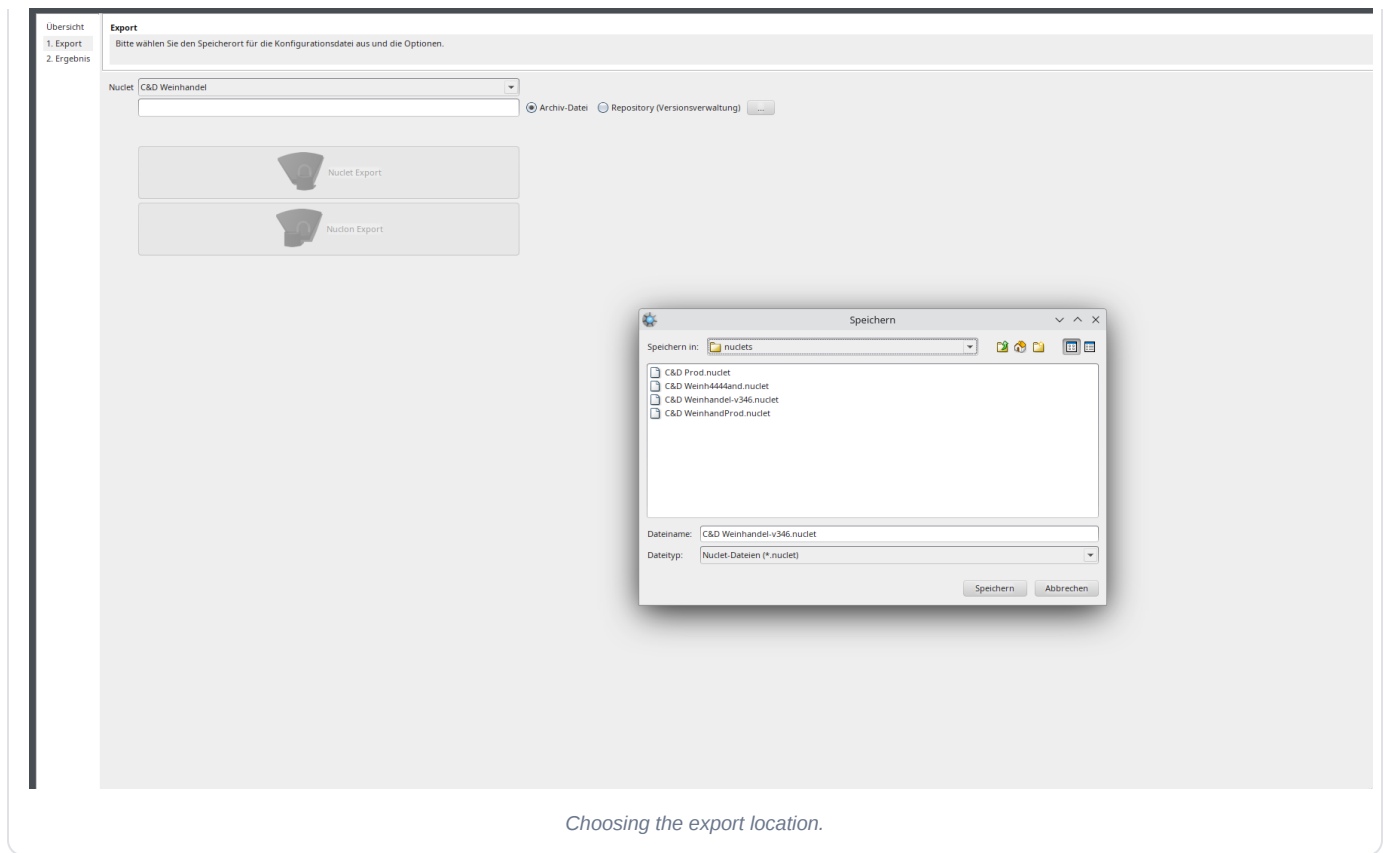

Target format

Archive file exports a nuclet as a ZIP package; **Repository** exports it in file format.

Assigning components.
