🔧 Extending the result list view with custom buttons

Custom toolbar buttons in the result list – `ResultToolBarItem(Factory)`, `@NucletComponent` and beans XML.

HOW-TO

DEVELOPER

UPDATED: JUL 2026

APPLIES TO NUCLOS 4.2026.X

On this page

- [Step by step](#)

The toolbar of the result list view can be extended with custom buttons and arbitrary actions via the interfaces `ResultToolBarItem` and `ResultToolBarItemFactory`.

Step by step

1. Implement the interfaces in a client extension.
2. Annotate the implementing class with `@NucletComponent` so Nuclos finds the factory at client startup.
3. Add an entry for each implementation in `nuclos-extension-client-beans.xml`:

Client-Extension
