Page flow

Navigation behaviour of the web client – how actions affect the list, detail view and URL.

REFERENZ

DEVELOPER

UPDATED: JUL 2026

APPLIES TO NUCLOS 4.2026.X

The **page flow** describes how the web client updates the side-view list and the detail view depending on the action, and how the URL is adjusted.

Action	Side-view list	Detail view	URL
Entry via URL (FQN)	last search	first matching record	ID of the first record
Entry via URL (FQN + ID)	last search	requested record	–
Entry via URL (search parameters)	new search	first matching record	ID of the first record
Object generator call	last search	newly created record (temporary on exception)	temp ID on exception
Click a side-view/tree-view entry	selection	requested record	ID
Search via search template	new search	first matching record	ID of the first record
