APPLIES TO NUCLOS APP 1.0

On this page

- [Interface language](#)
- [Data language](#)
- [Related pages](#)

Like Nuclos itself, the app separates two languages: the **interface language** (UI and field labels) and the **data language** (the language of multilingual data values).

Interface language

On start the app initially adopts your **device language**. In [Settings](#) you can pick one of the languages offered by the server under **Language**. The choice affects both the app UI and the labels delivered by the server.

Regional formats

Numbers, dates and times are formatted **according to the chosen language/region** (e.g. decimal separator, date format).

Data language

If your Nuclet maintains multilingual data values, Settings additionally shows **Data language** – but only when the server offers **more than one** data language. The choice determines the language in which multilingual values are shown; the language marked *primary* is the default.

Chosen independently

Interface and data language are independent: you can run the app in German, for example, but display data values in English.
