Machine-translated – under review

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

Notes on the background of the necessary adjustments

The reason for the adjustments described here is, on the one hand, that the format of the SEPA messages is changed.

On the other hand, with this change the SEPA sequence type "express direct debit" is dropped.

From now on, all basic direct debits are executed directly on the next possible date (as the express direct debits were before).

5.5.1 Updating the server extension

The server extension `org.nuclet.sepa.jaxb-2.1.0.jar` described in step [4.3.2](#) must be replaced by the current version `org.nuclet.sepa.jaxb-2.3.0.jar`, i.e. in the two following folders:

- in the "extensions/server" directory of the Nuclos installation
- in the "webapp/WEB-INF/lib" directory of the Nuclos installation

5.5.2 Deactivating the SEPA sequence type "express direct debit"

The SEPA sequence type "express direct debit" is obsolete with the change to the new format. The sequence type "basic direct debit" takes over this function. Therefore, please open this record in Nuclos under "SEPA > Master data" and set the flag "Active" to the value "no".
