 **Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

4.5.1 Layout of the reference business object

After entering the reference business object used (invoice, etc.) in [step 4.4](#) the layout of this reference business object can be supplemented. It is recommended to create a sub-form "bank transactions" (or "payments", "incoming payments") in the reference business object used. This sub-form then maps all assigned bank transactions. As the business object used here, please select "Bank Transaction Ref", as the foreign key "reference".
