**Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

Feature scope

- The DATEV Nuclet lets you export data in CSV format for further processing in DATEV.
- The export is performed automatically and job-controlled.
- Alternatively, exports can also be run manually. The manual execution allows a preliminary check of the data to be exported.
- Exports that have been run are logged and can be viewed in the export record.
- Reference objects (e.g. invoices, customers, turnover or booking items) can be assigned to the logs.
