#### Machine-translated – under review

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

### 4.5.1 Adjustments in export layouts (optional)

The DATEV Nuclet provides a separate layout for each export type ("customer export", "invoice export", "turnover export"):

- "DATEV Client Billing Export" for invoice exports
- "DATEV Client Export" for customer exports
- "DATEV Turnover Export" for turnover exports

These three layouts enable the integration of the typed dynamic business objects (see section 4.4.2), each of which is embedded via the dependent subform "References".

In these layouts, the dependent subform "References" would therefore have to be adapted to your own requirements.
