Notes on Nuclos 3.10

Special upgrade notes for Nuclos 3.10 beyond the regular release notes.

REFERENCE ADMINISTRATORS **UPDATED: JUL 2026** APPLIES TO NUCLOS 4.2026.X

On this page

 **Machine-translated – under review**
This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

 **Nuclos 3.10 requires Java 7**
As of Nuclos 3.10, Nuclos only runs under Java 7. For a transitional period, a Java 6 build of Nuclos 3.10 can be provided on request.

 **Logbook / history were reworked and extended with new functions (NUCLOS-934)**
With the update to Nuclos 3.10 the old logbook (reachable via the "Extras" menu in detail forms) is replaced by a new implementation, and the old logbook is disabled by default. The data from the old logbook is **not** carried over into the new logbook, but the old logbook remains accessible for reading if you explicitly set the system parameter ACTIVATE_LOGBOOK to "true".
