📖 Notes on Nuclos 4.2023.8

Special upgrade notes for Nuclos 4.2023.8 beyond the regular release notes.

REFERENCE ADMINISTRATORS **UPDATED: JUL 2026** APPLIES TO NUCLOS 4.2026.X

On this page

**Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

**Rich client remoting interface**

The remoting interface (mainly used by the rich client) was changed from Java RMI to the JSON format. This interface now also reaches the security level of the RESTful service (see also [Remoting](#)). By default, Java RMI is disabled as of 4.2023.8, but it can be re-enabled via the entry `remoting.java-rmi.enabled=true` in the **server.properties** if, for example, not-yet-migrated extensions require this technology. Note: this is reset again by the installer!

You can find more information about the migration in the ticket [NUCLOS-9738](#) - Abrufen der Vorgangsdetails... STATUS
