📖 Notes on Nuclos 4.2024.25

Special upgrade notes for Nuclos 4.2024.25 beyond the regular release notes.

REFERENCE ADMINISTRATORS **UPDATED: JUL 2026** APPLIES TO NUCLOS 4.2026.X

On this page

**Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

**Permissions "Batch processing" and "Bulk processing"**

As of this version there is a system permission "Perform batch processing". Combined with the permission "Perform bulk editing", the following behavior is now consistent between the rich and web client:

- **Perform batch processing:** Selecting and processing multiple records: delete, run custom rules, run object generators, state change
- **Perform bulk editing:** Rich client: edit detail view and values; web client: edit values. This permission requires the assignment of "Perform batch processing".
