📖 Notes on Nuclos 4.2025.34

Special upgrade notes for Nuclos 4.2025.34 beyond the regular release notes.

REFERENCE ADMINISTRATORS **UPDATED: JUL 2026** APPLIES TO NUCLOS 4.2026.X

On this page

**Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

**Schema change to the data-language tables (`_LANG`)**

As of Nuclos 4.2025.34, databases that are on the schema level of a previous version undergo a migration of the data-language tables. The foreign-key columns of the data-language tables are switched to "onDeleteCascade". This makes it possible to delete records that reference a localized BO, which was not possible before because the translations were not deleted automatically in a cascading manner. Previously the reference had to be deleted manually first. In addition, when a data language is deleted, all translations for that language are now automatically deleted in a cascading manner. Previously a data language could no longer be removed while translations for it still existed in a `<Businessobject>_LANG` table.
