Notes on Nuclos 4.32

Special upgrade notes for Nuclos 4.32 beyond the regular release notes.

REFERENCE ADMINISTRATORS **UPDATED: JUL 2026** APPLIES TO NUCLOS 4.2026.X

On this page

**Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

**REST links**

The HATEOAS links that the REST service generates automatically are protocol-relative as of this version. That is, the URLs start with `//`, instead of `http://` resp. `https://`. In addition, the port is only inserted if it differs from the standard ports 80 or 443.

This enables setups in which the Nuclos server sits behind a reverse proxy that is accessed via HTTPS but communicates with Nuclos only over HTTP. See [NUCLOS-7818 - Abrufen der Vorgangsdetails...](#) **STATUS** .
