Notes on Nuclos 4.40

Special upgrade notes for Nuclos 4.40 beyond the regular release notes.

REFERENCE ADMINISTRATORS **UPDATED: JUL 2026** APPLIES TO NUCLOS 4.2026.X

On this page

 **Machine-translated – under review**

This page was machine-translated from German as a first draft and is currently under review. The authoritative source remains the **German original** (see the language switch above).

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

 **Color support**

Currently the state of the multi-selection in bulk editing is only visible via checkboxes; this is to be extended by a colored highlighting of the selected elements.

 **WebAddon**

The dashboard in the web client requires project-specific addons. We therefore need a new addon type as well as a way to configure parameters and the generic integration into a dashboard.

 **Multilingual REST**

The REST interface is to be extended so that the data language can be set at the start of the session and the results for multilingual fields are then returned automatically in the selected data language for all BO service queries.
