IndexOutOfBoundsException when selecting via LOV search list

When selecting a record via a LOV search list for a reference field from a subform, the following *IndexOutOfBoundsException* occurs:

The notes on this page highlight special changes that require separate mention beyond the release notes. This applies in particular when upgrading to a new Nuclos release requires certain additional preceding or subsequent measures that must be observed to avoid unwanted behavioral changes or side effects introduced by new features.

STATUS

Rule assignments to integration points are not exported

Rule assignments to integration points are not exported

- During the Nuclet export, the two rule assignments to an integration point are not exported, see the attached image.
- Already set BLNSOURCE, reassigned the rules via the form and restarted the server.
- In 4.46.9 the assignments are still exported.

To reproduce, the example Nuclet (see attachment) and the XRechnung Nuclet (see Git - add as a dependency) can be used.

STATUS

Error in the "Change password" function in the web client when tenant management is active

When tenant management is active, the password can only be changed in the web client for superusers. For normal users an error occurs ("Precondition Failed", see screenshot). When I remove tenant management from the Nuclet, it works again for all users.

The error only occurs in the web client.
