

8. Changing the state of a BO

🌐 Language: [Deutsch](#) · [English](#)

🔧 8. Changing the state of a BO

State change via REST – read nextStates and trigger via GET on the state-change link.

HOW-TO

DEVELOPER

UPDATED: JUL 2026

APPLIES TO NUCLOS 4.2026.X

On this page

- [Trigger a state change](#)
- [Related pages](#)

A BO read earlier returns the reachable states under the key nextStates – depending on the current state and the user's permissions.

Trigger a state change

The call is a **GET** on one of the state-change links (boStateChanges/{boMetaId}/{boId}/{nuclosStateId}). On success: HTTP 200 (OK).

Reload the BO

A state change can modify the BO in many ways via rules – it is often advisable to **reload** the BO afterwards.
