What are static components?

Static components are **not bound to an attribute** and are therefore not considered in the permission concept.

Common use cases

- **Labels** for static text or alternative captions.
- Processing input logic in a dedicated extension class.

The screenshot displays the NUCLOS application interface. On the left, a 'Palette' (palette) lists various components. Under the 'Statische Komponenten' (Static Components) section, 'Label' is highlighted with a red rectangle. The main area shows a form for 'Kunde' (Customer) with fields for 'Kundennummer', 'Name', 'Stammkunde', 'Erstkontakt am', and 'Kontaktart'. Below the form is a table for 'Ansprechpartner' (Contact Persons) with columns for Name, Telefonnummer, Email, Land, Erstellt am, Geändert von, Adresse, and Geändert am. The status bar at the bottom indicates 'Datensatz 2/3' and 'Geändert von: nuclos [24.02.2017 15:52:03]'.
