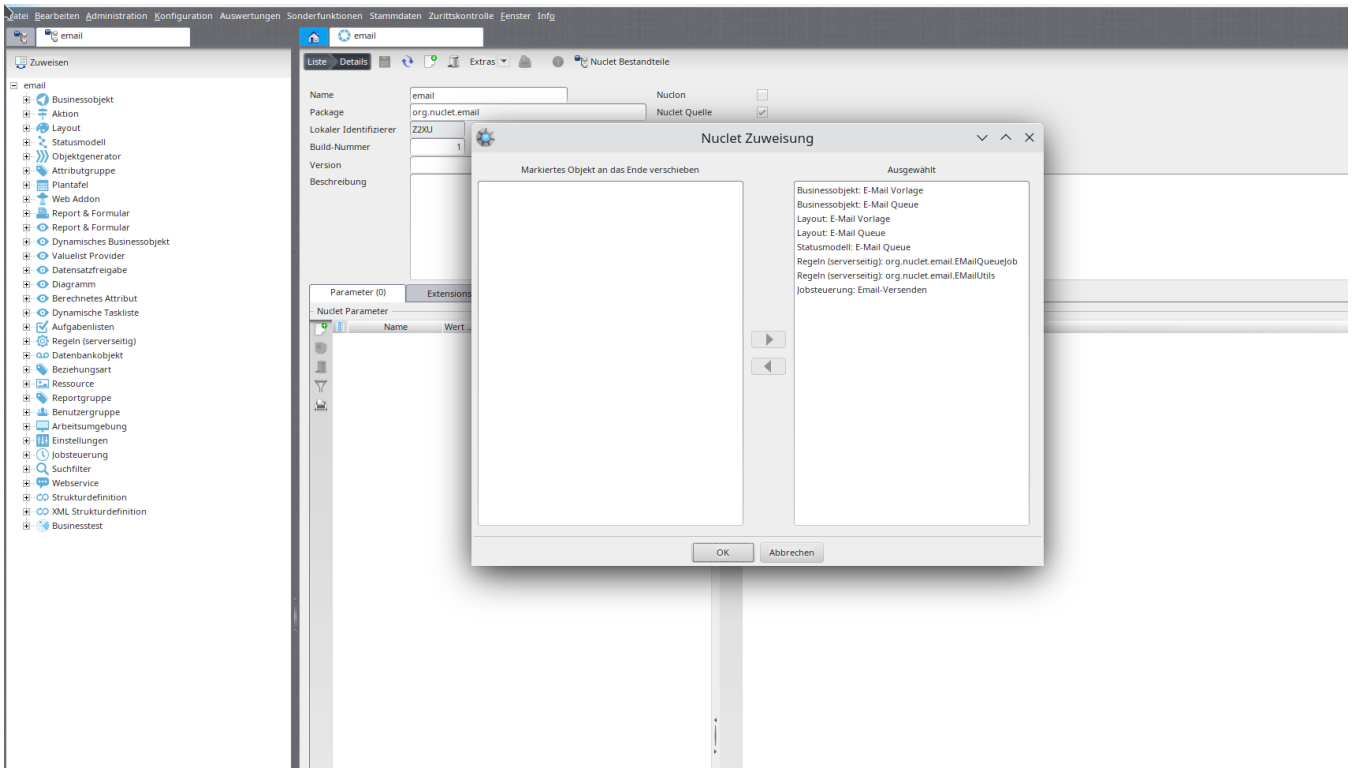
Assign components and export

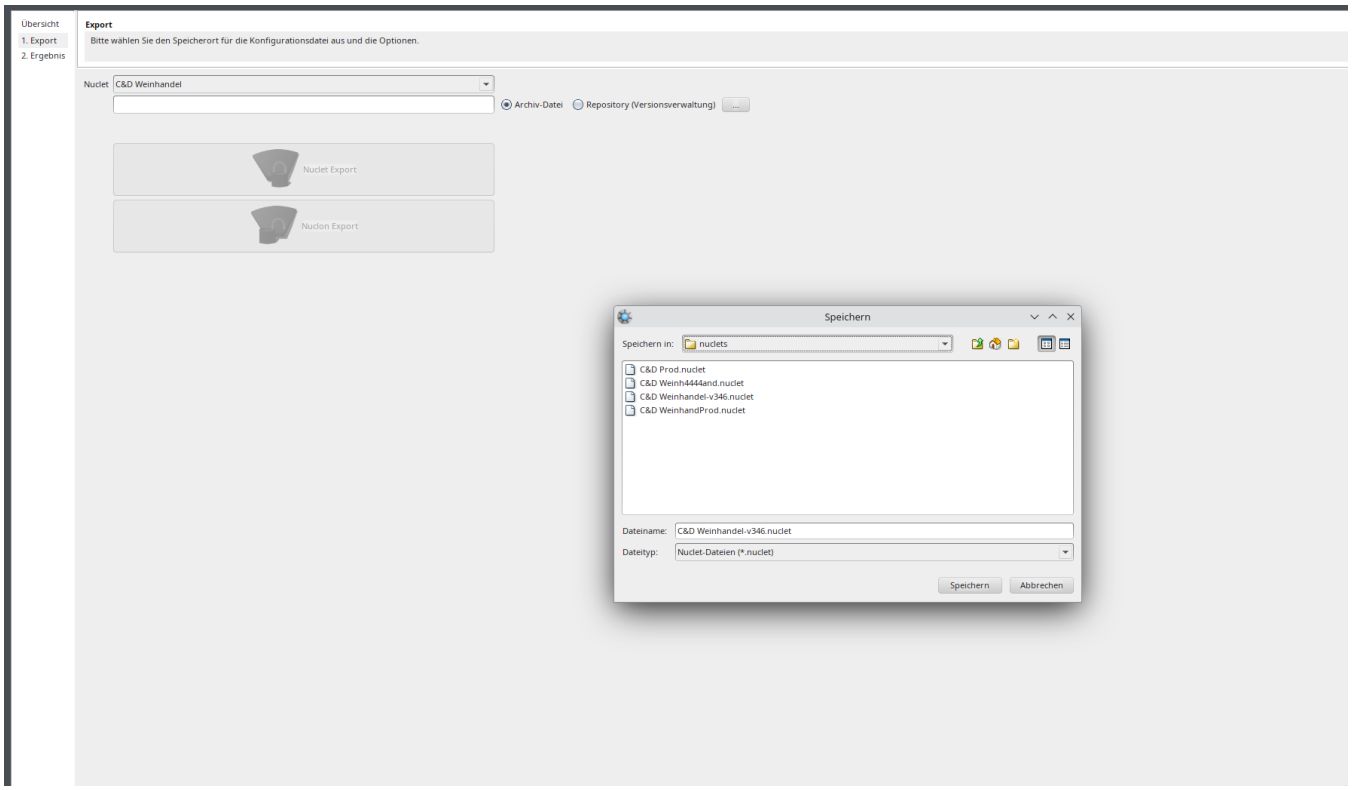
A nuclet bundles selected configuration components into an archive file that can be imported into another instance.

1. Open the nuclet under **Configuration Nuclet**.
2. Go to **Nuclet components** and click **assign** on the left.
3. Assign the desired components to the nuclet.
4. Choose the location via **Export** and the … button.

> **Target format**
>
> **Archive file** exports a nuclet as a ZIP package; **Repository** exports it in file format.



Assigning components.



Choosing the export location.
