

Edit subform records in the detail view

🌐 Language: [Deutsch](#) · [English](#)

🔧 Edit subform records in the detail view

Edit subform records directly in a split detail view overlay – with all rule mechanisms applied.

HOW-TO

USER

UPDATED: JUL 2026

APPLIES TO NUCLOS 4.2026.X

On this page

Note

Rich Client only. A similar function exists in the [Web Client](#).

The toolbar function **Detail view** lets you edit subform records in a split detail overlay – provided a suitable layout exists.

Subform record in the detail view.

Warning

Editing here differs fundamentally from editing directly in the subform: all „normal“ rule mechanisms apply.

Prerequisites

- A layout for the subform BO exists.
- „Ignore subform layouts“ = `false`.
- No script control of display/editing („New active (dynamic)“ empty).
- The subform is „Active“.
- The user has at least an **explicit** read right on the subform BO (implicit rights are not enough).
