The Web Client uses a uniform URL to display a record:

```
{URL}/webclient/#!/view/{boMetaId}/{INTID}
```

This lets you send a business object directly as a link. If the INTID is unknown, build the link via a search call:

```
{URL}/webclient/#!/view/{boMetaId}/search/{boAttrId}{Operator}{Value}
```

Variable	Meaning
URL	address of the Nuclos server
boMetaId	Nuclet + BO name, separated by underscore
INTID	primary key of the record
boAttrId	field name of the attribute
{Operator}	%3D = equals, %3D*Value* = like (%3D is „=“, %3F is „_“)
{Value}	search term (single quotes allowed)

Example:

```
{URL}/webclient/#!/view/{boMetaId}/search/nummer%3D'%3FV0%3F00058'*
```

finds records whose nummer attribute is e.g. „AV0x00056yyy“.
