

JMS logging

🌐 Language: [Deutsch](#) · [English](#)

🔧 JMS logging

Log incoming and outgoing JMS connections (ActiveMQ) – one logger entry in `log4j.properties`.

HOW-TO

ADMINISTRATOR

UPDATED: JUL 2026

APPLIES TO NUCLOS 4.2026.X

On this page

From version 3.13.8 incoming and outgoing **JMS connections** can be logged. Add to `log4j.properties`:

Fehler beim Rendern des Makros 'code': Ungültiger Wert für den Parameter 'com.atlassian.confluence.ext.code.render.InvalidValueException'

`log4j.logger.org.nuclos.server.web.activemq=DEBUG`

After a **server restart** the output appears in `server.log`. Example:

```
2013-06-21 09:40:54,343 DEBUG [org.nuclos.server.web.activemq.NuclosJMSBrokerTunnelServlet] - get request
http://localhost:8090/nuclos-war/jmsbroker
```

The URL shows which machine is connected to the server.
