Audience

This article is aimed at Nuclos team members and everyone who wants to contribute to bug fixing/improvements.

Changes to **system layouts** do not take effect immediately – only a new build of the Nuclos version contains them. Without direct write access, the change is submitted as a **pull request** to the Nuclos team.

Show system layouts in the editor

System layouts appear in the layout editor when the *Dev* function block (`functionblock.dev=true`) is active – via the VM option `-Dfunctionblock.dev=true` or (from 4.19.1) via a hidden link at the top left of the About page.

Saving / updating

System layouts are not stored in the database and cannot be saved directly. You update them via **export** in the Nuclos repository under `nuclos-server/src/main/resources/resources/layoutml` and commit or send a pull request.
