

Add a subform

 Language: [Deutsch](#) · [English](#)

Add a subform

Building on the quick-start tutorial: extend the customer with multiple contacts – as a subform (1:n relation).

TUTORIAL

BEGINNER

UPDATED: JUL 2026

APPLIES TO NUCLOS 4.2026.X

On this page

- [1. Configure master data "Country"](#)
- [2. Configure the subform](#)
- [3. Adjust the customer layout](#)
- [4. Maintain data](#)

Before you start

Complete the [quick-start tutorial \(DE\)](#) first, or import its Nuclet.

Each customer should support multiple contacts (name, phone, email required; country as a list; address as a multi-line field).

1. Configure master data "Country"

Requirement: Countries should be maintained in a master-data form.

In Nuclos: Generate a new business object "Country".

Your browser does not support the HTML5 video element

2. Configure the subform

Requirement: Extend the customer with contact fields as a 1:n relation.

In Nuclos: Create a business object "Customer contact" with the attributes.

Your browser does not support the HTML5 video element

3. Adjust the customer layout

Requirement: The customer form should allow multiple contacts.

In Nuclos: Embed the new BO as a subform in the customer layout.

Your browser does not support the HTML5 video element

4. Maintain data

Requirement: Contacts should be entered for a customer.

In Nuclos: Open the customer form and maintain contacts.

Your browser does not support the HTML5 video element
