

Actions

 Language: [Deutsch](#) · [English](#)

Actions

Give a BO a business variant – per action its own layout, status model and generation.

What are actions?

Menu: *Configuration Miscellaneous Action.*

An **action** is a more specific variant of a business object. Per action you can assign a dedicated [layout](#) and a dedicated [status model](#); object generation is also specified through it. Example: a BO „customer order“ with the actions *direct order* and *subscription order*.

Caution

The action mechanism only makes sense if a business object has **more than one** action.

Configuration

Fields of the action mask: **Action** (label in the selection list), **Business object** (scope), **Valid from/to** (period) and **Description**.

Actions in layouts

1. Create the desired layouts.
2. Under **Usage**, define the actions the layout applies to.
3. Add the action field (attribute *prozess / Nuclos Process*) to the layout.

Required: default layout & process field

There must be a **default layout** (usage row with an empty action). If the *Nuclos Process* field is missing in a layout, Nuclos immediately jumps back out on opening – it may be hidden but not omitted.

Actions in status models

1. Create the desired status models.
2. Under **Usage**, assign the matching actions.

Default status model

A **default status model** is required here too (usage row with an empty action). Without the inserted action field, new objects automatically get the default status model.
