📖 Configuring the Java heap

Configure the heap for the server and rich client – via installation, launcher (-Xmx) or the parameter CLIENT_MAX_HEAP_SIZE.

Server

The server heap is set during **installation**.

Client (rich client)

The client heap can be configured in two places:

Location	Setting
Launcher	Settings Java configuration: for 4 GB add the entry -Xmx4096m.
Parameter	Set the parameter CLIENT_MAX_HEAP_SIZE e.g. to 4096m.

 **Recommendation**

For large data volumes or many open forms a higher client heap is recommended to avoid *OutOfMemory* errors.
