🔧 Unicode fonts

Render complex characters correctly – set the font family via the `NUCLOS_FONT_FAMILY` parameter.

HOW-TO ADMINISTRATOR UPDATED: JUL 2026 APPLIES TO NUCLOS 4.2026.X

On this page

- [Parameter `NUCLOS\_FONT\_FAMILY`](#)
- [Related pages](#)

The rich client uses the *Synthetica* look-and-feel. Depending on the OS the default font may not render complex characters (e.g. Chinese) correctly – then the font family must be set manually.

Parameter `NUCLOS_FONT_FAMILY`

Path: *Administration* *Parameter*. Create a new parameter:

Field	Value
Name	<code>NUCLOS_FONT_FAMILY</code>
Description	any
Value	font family to set, e.g. <code>Arial Unicode MS</code>

Save and **restart** Nuclos so the font takes effect already at client start.

Fallback

If the specified font is not found, the *Synthetica* default applies – characters may then still be displayed incorrectly. Ensure the font is Unicode-capable and installed.
