The **Swagger UI** is installed automatically with Nuclos and gives an overview of all provided services – an ideal entry point and an interactive explorer.

Prerequisites

Type	Description
Installer	the web client is installed as well.
Installer	installation as a development environment.
Permission	log in to the web client as a super user.

Production environment

Also usable in a production environment: set `environment.development=true` and `environment.production=false` in `NUCLOS_HOME/conf/system.properties` and restart the server (opens no development ports). The next installer run resets this!

Access

After logging in to the web client, the `</>` icon appears on the right of the menu. It shows all supported calls; after selecting a service you can edit parameterized URL parts (e.g. `{boMetaId}`) and run them directly via *Try it out*.
