Advanced options for the chart configuration (JSON). For the basics see [Charts](#).

Sorting

By default sorting is by categoryBoAttrId; alternatively:

Fehler beim Rendern des Makros 'code': Ungültiger Wert für den Parameter 'com.atlassian.confluence.ext.code.render.InvalidValueException'

```
"chart": {
  "primaryChart": {
    "sort": {
      "sortByBoAttrId": "nuclet_test_charts_FinancialFigures_gewinn",
      "sortDirection": "asc"
    }
    ...
  }
}
```

Crosshair (4 quadrants)

Define two attributes in the data source (only the first record is used as coordinate) and configure them in the chart:

Fehler beim Rendern des Makros 'code': Ungültiger Wert für den Parameter 'com.atlassian.confluence.ext.code.render.InvalidValueException'

```
"chart": {
  "primaryChart": {
    "crosshair": {
      "categoryBoAttrId": "example_rest_CategorySalesCustomerCRT_crosshaircategory",
      "seriesBoAttrId": "example_rest_CategorySalesCustomerCRT_crosshairseries",
      "color": "green"
    }
  },
  ...
}
```

Combined line/bar chart

The data series to be shown as bars gets the "bar" flag. With identical scaling, the Y axis can be synchronized.

Tooltip

The tooltip information can be extended by an additional attribute per series.
