What are data sources?

Data sources are stored, parameterisable queries over your [business objects](#). They are the basis for calculated attributes, value lists, dynamic objects, reports/forms and charts – built graphically or via SQL.

Menu: Configuration Data sources

Uses

- Calculated attribute** – compute values when reading from the DB.
- Value list provider** – dynamic pick lists (e.g. depending on the user's location).
- Dynamic business objects** and **dynamic task lists**.
- Report & form** – data basis for evaluations.
- Record sharing** and **charts**.
