Reports and forms

Via *Configuration Report* you create **forms** and **reports** that present a [business object](#) in printable form. The basis is usually a [data source](#); you design them with **Jaspersoft Studio** (JasperReports).

Menu: *Configuration Report*

Form vs. report

- **Form** – printable representation of a single record (e.g. quote, invoice, delivery note).
- **Report** – evaluation across many records (lists, statistics).

Workflow with Jaspersoft Studio

1. Create a data source in Nuclos and connect it in Jaspersoft Studio.
2. Design the template (.jrxml) – bands, fields, subreports, charts, barcodes/QR codes.
3. Upload the template to Nuclos and assign it to the business object/status; set the output file name.

In depth

Detailed pages for charts, formatting, subreports, fonts and QR codes are currently available in the German space.
