

Hyperlink

Eine Möglichkeit besteht darin folgenden xml-Text ins JRXML-File einzufügen.

```
<textField hyperlinkType="Reference">
  <reportElement mode="Transparent" x="137" y="14" width="133" height="14"/>
  <textElement>
    <font size="11"/>
  </textElement>
  <textFieldExpression class="java.lang.String">"www.nuclos.de"</textFieldExpression>
  <hyperlinkReferenceExpression>"http://www.nuclos.de"</hyperlinkReferenceExpression>
</textField>
```

Soll beispielsweise ein Image-Feld verlinkt werden:

The image shows a software interface with a context menu and a configuration dialog. The context menu is open over an image field, with the 'Hyperlink' option selected. The configuration dialog is titled 'Hyperlink' and has several fields and buttons. The 'Anchor Name Expression' field contains the text '"nuclos"' and is marked with a red circle '1'. The 'Hyperlink target' dropdown is set to 'Self'. The 'Hyperlink type' dropdown is set to 'Reference'. Below these are three tabs: 'Reference', 'Link parameters', and 'Tooltip'. The 'Reference' tab is active, and the 'Hyperlink Reference Expression' field contains the text '"http://www.nuclos.de"' and is marked with a red circle '3'. A red arrow points to the 'Reference' tab.

Rechtsklick auf das Image-Feld öffnet das Menü.
Hier kann Hyperlink ausgewählt werden.
